PATRIOT

Patriot injector system is an innovative product from USA. This compact-size electrical operated (at 13 -24 PSI and 240Volt) atomizer weights only 7.48kg, with the dimension of 11.5"x 8"x 10" (L x W x H). It is easy to use as flushing and spraying tool.

It comes with a 26ft coiled tubing that is detachable from the machine and the handle, making replacing worn out tubes hassle-free.

With the atomizing technology and high air stream in the unit, Patriot can spray a mixture of chemical and carrier into 0.5 micron droplet size. This will create the "dry surface spray effect" that is suitable for most sensitive areas including food handling premises.

As it is equipped with the light-weight J-curve wand and micron droplet range, the chemical can reach up to 1m, targeting the pests in the crack and crevices, even those hiding in deep void harborages.

Depending on treatment areas, the wand can be changed without any tools with the uniquely designed inter-changeable wand adaptor.

The Patriot is equipped with a chemical shut off valve, which allows replacement of routine parts, without loss of chemical. This cost effective feature stops contamination, and dermal absorption.

The Patriot is equipped with an unheard of 70.72 ounce stainless tank. That's about 253% bigger than those available in the market!
